Quarterly Business Review: Q3 2026

Account: Northfield Components

Prepared by: Priya Nair, Client Success Manager, Stockline Software

Meeting date: 12 November 2026

1. Executive summary

Northfield has had a steady quarter. System availability was 99.94%, above the 99.9% target, and the new goods-in process went live at Telford on 21 September. Receiving accuracy has risen from 94% to 97.6%, and average trailer wait time has fallen from 2 hours 10 minutes to 52 minutes. Two commitments from the last review remain open: the JIT ordering update and the manufacturing demand report.

2. Usage and adoption

Active users rose from 118 to 141 over the quarter, driven by the Telford goods-in team. The mobile application now handles 83% of all picks, up from 71%. Adoption of the analytics module remains low, with only 9 of 141 users logging in during September. Helen Shaw has suggested a short training session for buyers and planners.

Metric	Q2	Q3	Change
Active users	118	141	+19%
Mobile pick share	71%	83%	+12 pts
Receiving accuracy	94.0%	97.6%	+3.6 pts
Support tickets	212	187	-12%
Median ticket resolution	31 hours	22 hours	-9 hours

3. Support review

There were 187 tickets in the quarter, 14 of them priority one. Eleven of the priority one tickets were resolved within the four-hour target. The three that missed were caused by a label printer driver fault that took two attempts to fix. Engineering has since added the driver to the regression suite. The most common ticket category was report performance (41 tickets), mainly stock valuation and slow-moving stock.

4. Roadmap items for Northfield

The JIT ordering feature is in beta and is planned for general release in February 2027. Northfield has been offered a place on the beta programme. The manufacturing demand report is behind schedule because the data model needs to change to support multi-level bills of materials. A revised date will be given by the end of November.

The Poland and Vietnam supplier onboarding is not currently supported by the standard portal. Stockline proposes an interim approach using CSV uploads and will provide a written estimate for a full portal option by 4 December.

5. Commercial

The contract renews on 1 April 2027. Based on the growth in users, the licence count will need to rise from 150 to 200. Stockline will send a renewal proposal by 15 January. Northfield has asked for a multi-year option with a price hold, and for the proposal to show the cost of the analytics module separately.

6. Risks

- Report performance may worsen as SKU counts grow after the winter range is loaded.
- Key person dependency: the Telford configuration knowledge sits with one super-user, Owen Price.
- Peak season starts in late November and a change freeze will apply from 20 November to 4 January.

7. Agreed actions

1. Priya to confirm a beta slot for JIT ordering by 20 November.
2. Priya to deliver the revised manufacturing demand report date by 30 November.
3. Stockline to estimate the supplier portal for Poland and Vietnam by 4 December.
4. Helen to nominate six buyers for analytics training.
5. Owen to document the Telford configuration and share it with Stockline support.
6. Stockline engineering to profile the stock valuation report and propose fixes by 11 December.
7. Priya to send the renewal proposal, including multi-year pricing, by 15 January.

8. Next review

The next quarterly review is scheduled for February 2027. Helen will send calendar invitations once dates are agreed.
